

Across

- 4. A place that contains everything certain animals and plants need to survive.
- 6. Able to bounce back after change or disturbance.
- 7. An ecosystem that contains mostly grasses, not trees, shrubs, sand, or water.

Down

- 1. Species that can only live in one kind of ecosystem.
- 2. The variety of types of life, such as plants, animals, and insects, in a specific ecosystem.
- 3. Protect or save a part of nature, such as an ecosystem, animal, or plant.
- 5. The movement of species from one area to another, usually related to a change in seasons.
